

Rhetorical Analysis Memo

To: Ana Leigh Cooke

From: Team Git

May 5, 2017

Professor Cooke,

The purpose of this memo is to identify, articulate, and justify our visual and verbal strategies while writing and revising our project 4.

Visual Strategies

We employed a number of visual strategies to aid reading.

For the section on installing Git, we included screenshots of the different steps of the installation process so that users are not lost while going through the steps to install Git on the computer.

We chose to make inline code and block-style code chunks both blue, in order to clearly distinguish between code and prose. We chose to use the monospace font **Computer Modern Typewriter** for code sections.

Furthermore, we found that in practice explaining Git's version history through words alone can often confuse listeners. Thus, to better explain the changes to Git's version history when rebasing and cherry-picking, we incorporated the use of diagrams with individual nodes representing commits. These provided a visual representation of changes to Git's version history when using these commands.

Verbal Strategies

TODO audience adaptation (intro / intermediate accomodation)

TODO document organization (sections, subsections)

TODO problem/solution/discussion
